

Stringers

Introduction to Surfblanks' Wood/Foam Stringer Products can be found at www.surfblanksaustralia.com

Typically blanks up to 7'3" use a 3mm stringer, blanks to 8'3" use a 4.5mm stringer and blanks to 10'4" use a 6mm stringer

Surfblanks Australia offers a wide range of stringers. The reason for this is to allow each manufacturer to make their finished product look different to their competitors. Taking this a step further, a manufacturer may choose to offer a wide range of stringer types to satisfy their individual customer needs (ie, singles, doubles and triples). A handshaped surfboard made with an impressive stringer or two under a good glass job will outshine a moulded 'popout' in any cosmetic contest.

Stringer choices by price list 'foam blanks'. Approximately ten stringer choices appear on the price list for shortboards and approximately twenty appear for longboards. These choices are based on most ordered stringers and are included with the blank cost.

Stringer choices by price list 'stringer options'. Many more stringers appear on the price list as options that can be added to a plain blank. 'Single stringer glued beside another', 'Single stringer glued in a plain blank', or 'Two stringers glued any distance from centre'. To determine the cost first take the 'plain blank' price from 'foam blanks', then add the stringer option. As the chosen blank size gets larger, so should the stringer thickness, if it is the centre and only stringer.

Rockers

M08 is offered as the most popular in any sized blank. However rocker increase or decrease is readily available.

Surfblanks rocker chart lists large numbers of rockers for every blank. The printed chart is available on request or check the website.
